

BioClinica[®] Express

Redefining Functionality.

Benefits

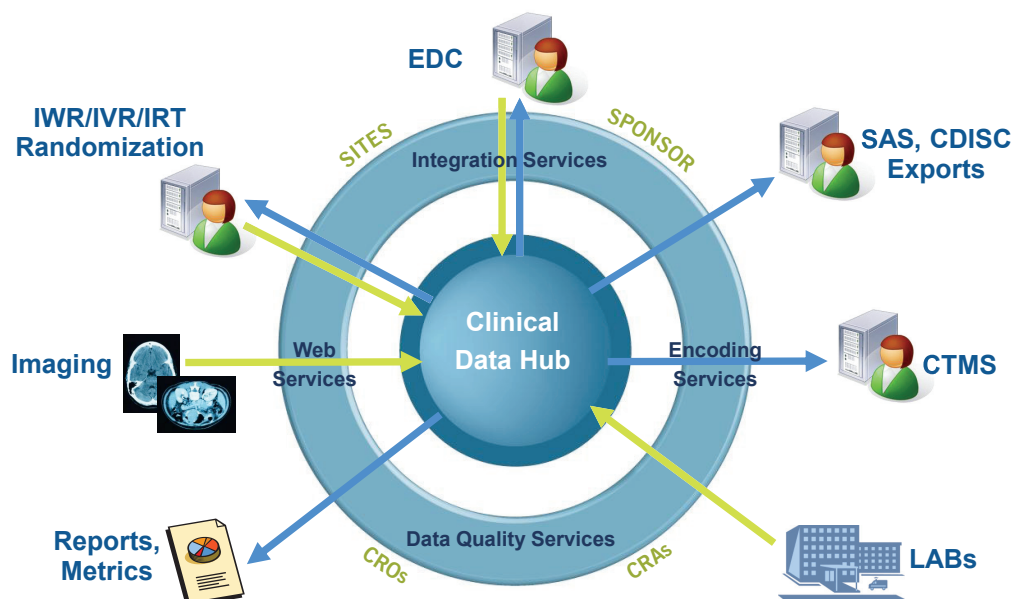

- Power Tools.**
 Tag and/or bookmark your data to facilitate workflow. Save customized data and query listings as private or public for later use. Auto-encode terms within the same application.
- Top-Notch Integration.**
 Express builds in support for real-time IVR randomization and integrates to other clinical applications with ease. Export data to CTMS to generate site payment data or export to SAS or other systems on demand for further analysis. CDISC-compliant output at the end of your trial saves time and maximizes exchange or integration with partners.
- Improved Efficiency.**
 Incorporate your external data such as lab data, PK data, and imaging metadata and other instrumentation data with your clinical data. Ongoing reconciliation provides cleaner data faster and simplifies your submission process.
- Efficient Communication.**
 Express maximizes your control with one-click access to top action items for improved study management.
- Global Support.**
 Complement your in-house resources and support your study globally with BioClinica's 24/7/365 technical assistance and data management.
- Exceptional Control.**
 BioClinica supports your study anywhere in the world and provides clients with self-service, on-demand features:
 - ODM-compliant data exports
 - Annotated and blank CRF Workbooks
 - Individual Patient Profiles
 - SAS datasets

A comprehensive EDC solution that adds speed and quality to every aspect of your clinical trial data acquisition.

Cleaner data. Lower costs. Faster database lock. Now, you can get more help from your technology!

BioClinica Express makes every part of your clinical trial process more efficient and manageable. Investigators can complete timely data entry and query resolution which leads to closing studies faster. Tools for power users make slicing and dicing the incoming data fast and easy. Role-specific dashboards focus attention where it's needed the most. And with upfront pricing, BioClinica helps you to manage costs and reduce the (vendor) paperwork while complying with all regulations and guidelines.

Express's advanced web-based architecture and user-focused design provides rapid data entry and review. Fully automated edit checks, including sophisticated cross-form edits, help to clean all of the data right at the point of entry, both guiding the user and improving efficiency. From its inception, Express was designed with the sites in mind. It provides a user interface that sites consistently rate as the most intuitive and easiest to learn in the industry.

BioClinica Express provides a Clinical Data Hub that coordinates and organizes the collection and dissemination of clean data throughout the clinical trial process.

Express is web-based, hosted by BioClinica, and frees you from managing applications or infrastructure in-house. BioClinica can also provide services that complement your in-house resources and support your study globally with 24/7/365 technical assistance. Need more? We also offer Full Service EDC, which combines the best of technology, clinical expertise and data management services to help you run your clinical studies more easily and more efficiently.

➡ BioClinica IVR/IWR**

Randomize patients on the web or the phone thru BioClinica Trident. Results available within Express can trigger EDC workflow and/or edit check functionality and eliminate the need for reconciliation.

➡ BioClinica® AutoEncoder*

The BioClinica AutoEncoder in Express supports all standard coding dictionaries for adverse events and concomitant medications, without ever having to leave Express. This precision tool allows sponsors to perform all the necessary coding with minimal staff.

* Included in unit price of the study.

** Optional features.

➡ BioClinica Study Development Environment**

The BioClinica Study Development Environment — speed customization of your data dictionary, eCRF forms and edit checks — the same tools we use are available to BioClinica licensees who choose to build their own studies.

➡ Additional Functionality**

BioClinica offers sponsors extended capabilities via an architecture that communicates in real-time between applications and maximizes data visibility, including:

- Clinical trial management
- Clinical trial randomization
- Clinical supply tracking and management
- Clinical payment management

The image displays two screenshots of the BioClinica Express web application. The left screenshot shows a study tree on the left with status icons (green checkmarks) and a data entry view for a demographic eCRF form. The form includes fields for Date of Birth (09/19/1960), Age (50), Sex (Female), Ethnicity (Not Hispanic or Latino), and Race (White). The right screenshot shows the 'Data Manager Access Point' interface, which includes sections for Sites (listing sites 1001-1008), Data Listings (Private and Public), Query Listings (Private and Public), and Bookmarks (protocol deviation).

Example of BioClinica Express showing study tree with status icons and data entry view of the Demographic eCRF.

About BioClinica

BioClinica, Inc. is a leading global provider of integrated, technology-enhanced clinical trial services. BioClinica supports pharmaceutical and medical device innovation with:

- Imaging core lab services
- Internet image transport
- Electronic data capture
- Interactive voice and web response
- Clinical supply chain design & optimization solutions
- Clinical Trial Management System (CTMS)

BioClinica services maximize efficiency and manageability throughout all phases of the clinical trial process. With more than 2,000 successful trials to date, BioClinica has supported the clinical development of many new products from early phase trials through final approval.

BioClinica operates state-of-the-art, regulatory compliant imaging core labs on two continents, and supports worldwide eClinical and data management services from offices in the United States and Europe.
