

BioClinica® WebSend

Obtaining the Images from Your Sites is Just the Beginning

BioClinica WebSend offers significant value over other methods to collect and manage images for clinical trials.

WebSend benefits clinical trials by expediting the submission and analysis of medical imaging data. Errors and costs are reduced by securely transferring medical images over the internet, rather than using courier services. Unlike other image transfer solutions, the system capabilities are fully integrated with BioClinica's processes to streamline the collection, processing, archival and analysis of medical image data. BioClinica provides all of the services necessary to centralize your medical image data and provide expert independent review for Phase I-IV clinical trials.

Key Benefits of WebSend:

- Faster centralized acquisition of your image data
- Enhanced data quality with fewer site queries
- Reliable long term archival and automated back-up of your imaging data
- Collaborative 24/7 access to view archived images from any computer with internet access
- Global support of an established, publicly-traded company with over 500 employees world-wide

BioClinica WebSend Features Include:

- HIPAA and 21 CFR Part 11 compliant
- High throughput performance and speed
- 24/7 image access via web
- Automated image de-identification
- E-mail confirmation of transfer results
- Multi-language help desk
- Web-based collaboration for all imaging modalities
- Reliable long-term storage & automated backup of all imaging data
- Online collaboration features including web-based image review, folder sharing and online commentary
- Customizable workflow management tools for image review and analysis
- Real-time reporting tools and user-friendly, exportable reports available online
- Integration capabilities with BioClinica's other state-of-the-art image management solutions

Proven and Established

With over ten years of worldwide experience and technological refinements, WebSend is the proven solution for managing the electronic sharing, blinding, tracking, archiving and analysis of medical images for single or multi-center clinical trials with imaging endpoints.

Support for All of Your Imaging Data

In combination with our traditional imaging core lab services, BioClinica can manage 100% of your trial's imaging data. BioClinica can receive and process imaging data electronically, however we can also quickly and efficiently process imaging data from sites that may not have the ability to output their images electronically or do not yet have adequate access to the internet. These sites can still submit their images to BioClinica via standard courier methods. We can receive and process these images, digitizing all of the imaging data (at no additional cost to the trial sponsor) to provide a complete set of images in electronic format.

Why BioClinica WebSend?

Obtaining the images from your sites is just the beginning – WebSend is the most comprehensive solution available for ensuring compliance with all regulatory and security requirements. BioClinica offers reliability whether you require only basic image transfer, or end-to-end clinical trial image and information management. Utilizing WebSend, the traditional bottlenecks and costs associated with manually locating, mailing, tracking, archiving and analyzing images are eliminated.

Simply stated, WebSend provides investigator sites with an easy-to-use tool that sites prefer over courier or other electronic alternatives. WebSend provides an easy way to transfer and de-identify images, complete transmittal forms with full validation of protocol-specific requirements, and securely send the images directly to BioClinica within minutes. WebSend automatically provides the sites with real-time confirmation of successful image transmission.
